

The student decided to study a global problem, such as the effects of acid rain, but utilized a very distinctive local approach. He was able to demonstrate his passion and curiosity for this subject. The experimental design shows an excellent understanding of the issues reinforced by the sound discussion of the findings. The student provided a sound analytical evaluation of the results supported by a wide range of updated scientific bibliographic references. Furthermore, he acknowledges the limitations of the investigation, making sensible suggestions for improvement of this or further research. The approach was thoughtful and efficient, as it was able to integrate the scientific results with the social implications for the region.
