

Multiplying Decimals

Multiplying decimals is not so hard. If you can multiply two numbers you can multiply decimals. To multiply 0.38 by 0.061, start by multiplying 38 by 61.

x	30	8
60	1800	480
1	30	8

Now add $1800+480+30+8=2318$.

There are five decimal places in the question, so there will be five decimal places in the answer. The answer is 0.02318.
